

'Turning science into better care'

"We have had the privilege and pleasure to work with Image Analysis Ltd for a couple of years on creating a cutting-edge algorithm for data handling in MRI. This has later been developed further and now represents a fantastic tool for evaluation of our patients. IA's team work with an endless energy and working hours beyond whatever we have seen before in our already rather active research community. We enjoyed working with these open minded and creative guys who I readily recommend!" Prof. Henning Bliddal, Frederiksberg Hospital, Denmark

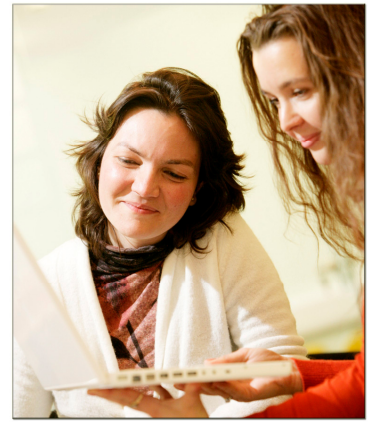

Image Analysis Ltd develops MRI analysis software for radiologists to interpret MRI data in clinical practice and clinical research and provides

- ❑ Technical support in diagnostic imaging projects and randomised clinical trials (RCT)
- ❑ Research consultancy and R&D support in diagnostic imaging projects and RCT
- ❑ Clinical training and education programme support
- ❑ Data handling and management in RCT
- ❑ General consultancy services

Research consultancy and R&D support in imaging projects and RCT

- ❑ End-to-end data analysis
- ❑ Bespoke algorithm development for optimising data acquisition, automating data processing, visualisation, interpretation, and reporting
- ❑ Use of state-of-the-art computer-aided software to speed up data analysis, exclude human bias, minimise errors, and improve the quality of the results
- ❑ Onsite data processing, results interpretation and statistical analysis
- ❑ Optimisation of imaging protocols using high and low field MRI, US, CT

Clinical Training and Education Programmes

- ❑ Creation of collaborative educational, promotional and communication plans
- ❑ Training in MRI, DCE-MRI in rheumatology using Dynamika-RA a tool
- ❑ Scientific course development

General Consultancy Services

- ❑ Assessment of IP and scientific proposition (idea selection, ROI, resource managements, risk management, business modeling, cost analysis)
- ❑ Feasibility study
- ❑ System design / Agile Development / Prince II based project management
- ❑ Imaging solution management
- ❑ Coordination of bids and proposals for internal and external use
- ❑ Imaging equipment procurement and selection
- ❑ Management of scientific recognition (articles, workshops, conferences) and post-project support
