### COMPANY & JOB DESCRIPTION

Image Analysis ([www.imageanalysis.org.uk](http://www.imageanalysis.org.uk)) is a multi-award winning rapidly expanding university spin-out, which provides specialist software and services to support clinical practice, imaging research, and imaging based clinical trials. It is a young and dynamic company, with Europe wide operating based and extremely capable and energetic team.

We are now looking for a research oriented imaging analysts with degree and work experience in medical physics or medical image analysis to complement our Research and Development team.

You have understanding of software development and experience with working with medical professionals in commercial or research environment.

All essential training will be provided to a chosen candidate.

### DUTIES & RESPONSIBILITIES

1. To participate in product development discussions
2. To assist in analysis and design of products and services
3. To respond to customer requests for assistance and interact with key users
4. To assist in administrative tasks associated with software engineering, monitoring and control.

### REQUIREMENTS

- BSc degree (preferred Master or PhD) in Physics, Medical Physics, Medical Image Analysis
- Research experience and ability to think outside the box
- In-depth understanding of imaging technologies, sequences, and medical data (MRI, CT, X-ray)
- Experience of working with clinical professionals or in clinical environment (Medical Qualification would be desirable)
- Work permit to come and work in the UK should be obtained (the company cannot provide you with the work permit)
- Able to self motivate when under taking small development projects.
- Willingness to communicate with customers face-to-face and online to assist in requirement gathering
- Understanding of analysis for drug discovery and development, image acquisition techniques, motion correction, and image processing
- Experience with working Computer-aided diagnosis software would be desirable
